Sintratec S1 awarded the European Medal 2018

Sintratec's Polish distributor [BIBUS MENOS](#) once again wins a prize with a Sintratec product; this time with the *Sintratec S1*. The European Medal is awarded every year by the [Business Center Club](#) and the [European Economic and Social Committee \(EESC\)](#) to honor and promote outstanding products and services distributed in Poland.

Brugg, 3 July 2018 – Sintratec's distribution partner BIBUS MENOS won a prize for a Sintratec product for the second time within just a few weeks: the *Sintratec S1* has been awarded the European Medal 2018.

The European Medal is a project of the Business Center Club (BCC), a prestigious business club for entrepreneurs in Poland, and the European Economic and Social Committee (EESC). The award recognizes high-quality products that are distributed in Poland and comply with European standards and regulations. The aim is to stimulate interest in the international European market among Polish companies and, conversely, to draw attention to the winners of the medal for companies and consumers from the European Economic Area. The European Medal has already been awarded for the 29th time. The official ceremony took place at the Grand Theater – National Opera in Warsaw, where BIBUS MENOS accepted the award.

"I'm very happy that we have another opportunity to promote Sintratec's products. The European Medal underlines our level of innovation and we are very honored to be among the chosen few. I truly believe this success will make us stronger on our way to continued development and will motivate us to take more challenges in the future", says Tomasz Weis, team leader at BIBUS MENOS.

Gabor Koppanyi, Head of Marketing and Sales at Sintratec adds: "We are excited about the success of our products in Poland. The award that BIBUS MENOS received for the *Sintratec S1* makes us particularly happy, as it confirms our investment in highest quality and world-class engineering."

About Sintratec

Sintratec is Switzerland's leading 3D printer manufacturer and specialized in the development and production of SLS 3D printers. The range includes compact laser sintering systems which process high quality polymers. Sintratec's laser sintering technology allows the production of complex and freeform objects which meet demanding part resolution, robustness and temperature standards. Many hundreds of professional Sintratec machines are in operation around the world in various industries, universities and research institutes.
