

Press release

Sintratec: New distribution partner in the Czech Republic

Sintratec is expanding its distribution network – bringing the Czech machine tool distributor Tecnotrade s.r.o. on board. This reseller partnership is a major step for the Swiss high-tech company towards opening up the market in Eastern Europe.

Brugg, 25 July 2017 – tool machine supplier Tecnotrade is now a distribution partner of Sintratec AG. The Czech company has been trading since 2001, offering a comprehensive range of premium quality machines for manufacturing tools. The focus was originally on CNC machines, but rapid prototyping and 3D printers obviously have an important part to play now. Working with Sintratec will enable Tecnotrade to enhance its portfolio in this area. The machines are displayed in a special 3D printing area – part of Tecnotrade's impressive show hall in Kuřim, Czech Republic.

"We were delighted to sign a contract with Sintratec, the leading manufacturer of small-format SLS 3D printers. The addition of Sintratec printers to our portfolio gives us the third type of major rapid prototyping technology – the selective laser sintering process. We now cover the entire rapid prototyping spectrum, enabling us to offer our customers the best solutions", says Pavel Oburka, Sales Manager 3D Printers at Tecnotrade.

And Gabor Koppanyi, Head of Marketing and Sales at Sintratec, sees working with Tecnotrade as a big opportunity: "Eastern Europe is a very important market for the 3D printing sector as a whole and for us as a young high-tech company. We are delighted to have found an experienced distribution partner in the shape of Tecnotrade. They are very familiar with our machines, which makes them ideally placed to provide our customers with excellent advice and support in the field."

About Sintratec

Sintratec is a Swiss high-tech company specialising in the development and production of SLS 3D printers. The range includes desktop laser sintering systems which work with high quality polymers. Sintratec's laser sintering technology allows the production of complex and freeform objects which meet demanding resolution, robustness and temperature standards. Around 300 professional Sintratec machines are in operation around the world in various industries, universities and research institutes.
