Sintratec wins valuable distribution partner ALSO

Sintratec - Swiss manufacturer of professional 3D printing systems in the field of selective laser sintering (SLS) - gains a valuable distribution partner in the European region: ALSO, with headquarters in Switzerland.

ALSO Holding AG is one of the leading technology providers for the ICT industry and currently active in 29 countries across Europe. The company began to explore the possibilities of 3D printing more than 5 years ago and has built up its own team of experts for this purpose. Customers can choose the optimal offer for their needs from different

providers for all process steps: from 3D scanning to modelling and print preparation, to the actual printing as well as post-processing and finishing.

Innovative strength is the common denominator of ALSO and Sintratec. This partnership will drive the further development of the promising 3D printing market. Sintratec is looking forward to a competent cooperation with the leading sales experts and the strengthened distribution network through ALSO.

Gustavo Möller-Hegt, CEO ALSO Holding AG

«Given the ongoing uncertainties in the supply chain, 3D printing continues to gain importance as a decentralized production option. We are pleased to integrate Sintratec, another 3D printing provider, into our ecosystem. With our broad portfolio in this area, we offer comprehensive and competent solutions for every requirement.»

Dominik Solenicki, CEO Sintratec AG (2nd from left)

«For the successful introduction of the next generation of manufacturing technology, a first-class and local support and distribution network is essential. We are therefore delighted to have found a leading distribution partner in ALSO, which already has many years of experience and success in the 3D printing market.»

Sintratec is the leading Swiss developer and manufacturer of precise 3D printers for professional use. The cost-effective and compact systems employ the selective laser sintering (SLS) technology in order to process high-quality polymer materials. By means of the Sintratec Technology, users can create complex objects with an exceptionally high freedom of design. Whether stiff or flexible, Sintratec materials are highly resilient and temperature-resistant.

Sintratec systems are in operation worldwide in various industries, research institutes and universities. Founded in 2014, Sintratec managed to grow into a leading technology company.
